

COUNTY-S

For taped SMD component counting. This machine works in a simple way by counting the holes on the tape.

It can operate in two different ways:

TOTALIZER: components are counted from a zero reference, tape feed is motorized and the counter automatically stops at the tape end, to prevent loss of the total.

PRESET MODE: the desired component number is keyed on the keyboard and the counter automatically stops when it reaches the corresponding component. Step number indication (division factor) is always present, showed on a two digit display.
